"ZeroTouchWare is a Software company primarily helping Small and Medium Businesses Optimize their IT Development and Support Operations and reduce TCO by 2 to 10 times."

We are the first company in the world specializing in Zero Touch, Self Provisioning, On-Demand, Multi-tenant IT Infrastructure and Service Management solutions. Our effective combination of solution architecture and solution delivery model leads to maximum ROI and Minimum TCO.

Our ITIL® / ITSM® compatible Service Management Solution is highly customizable and can be easily configured to align with customer's unique business needs rather than the customer adapting to the solution. The Self Provisioning rule based administration capability empowers the customers to modify the solution to their needs without the involvement of technical resources. All the products in our solution suite are loosely coupled and seamlessly integrated to facilitate stepwise implementation of IT service management process.

We offer different pricing models that fit the budget and needs for organizations of all sizes. We strongly believe in utility pricing model, in which the price you pay is based on your solution usage rather than a flat fee.
